Clik-FIX PICC/Central

WCS-1000 - Tricot

WCS-1003 - Foam

Starboard Medical's Clik-FIX Catheter Securement Device makes securing a PICC or Central catheter easy. Clik-FIX is a universal device designed to secure most PICC and Central catheters with an active dual locking mechanism. When it comes to catheter securement, the method of securement can have a direct impact on catheter complications, functionality and dwell time. Clik-FIX is an effective alternative to sutures, tape, tape based stabilization and other securement systems.

- Helps prevent catheter movement and migration
- Engineered to withstand an 8 pound pull force
- Patient and clinician friendly placement and removal
- Works well with existing catheter dressing protocols
- Comfortable, stable, secure

Catalog No.	Description
WCS-1000	Clik-FIX Catheter Securement for PICC and Central Catheters with Wings - Tricot Pad
WCS-1003	Clik-FIX Catheter Securement for PICC and Central Catheters with Wings - Foam Pad
	50 Units Per Box

Clik-FIX Peripheral

Clik-Fix Peripheral Catheter Securement is an all-in-one Engineered Stabilization Device (ESD) with bio-occlusive dressing. Clik-Fix All 'n One Peripheral Catheter Securement replaces the need to use individual tape, gauze and transparent dressings. The window provides for a clear view of the insertion site and surrounding skin. Clik-Fix PCS is designed to stabilize the catheter at the hub and also at the luer lock junction providing two times the stabilization to help prevent catheter movement, dislodgement and associated complications. Superior securement helps IVs stay active longer reducing complications and costs.

- All 'n One Engineered Stabilization Device for Peripheral IV Catheters
- Bio-Occlusive dressing protects insertion site
- U-shaped window provides for visualization of access site and surrounding skin
- Foam base pad cushions the load on the skin to help reduce pressure injury risk
- Non-irritating adhesive foam and dressing provide superior securement, yet are easy to remove
- Replaces tape and transparent dressing

PCS-1011	Clik-FIX All 'n One Peripheral IV Securement
	50 Units Per Box

Clik-FIX Hub/Luer Lock

Clik-FIX Catheter Hub/Luer Lock Securement is designed to stabilize and secure any medical tubing junction with a luer lock connection. The foam adhesive base provides a cushion for the luer lock to minimize pressure points on the patient's skin. The foam top with luer lock window holds the luer lock in place by providing a physical barrier around the connection thereby reducing direct adhesive pressure on to the luer lock and patient.

- Center split release paper allows for easy removal of the release liner and placement of the device
- Skin friendly adhesive is solvent free, comfortable and holds well
- Stabilizes any medical tubing with luer lock connection
- Window cutout feature reduces direct pressure on the hub and patient

Catalog No.	Description	Size
LLS-1021	Clik-FIX Universal Hub/Luer Lock Securement Device	Large
LLS-1024	Clik-FIX Universal Hub/Luer Lock Securement Device	Small
	50 Units Per Box	

Clik-FIX Foley

Designed with "care in mind", Starboard Medical's Clik-FIX Foley Catheter Stabilization Device provides comfortable, soft, and reliable securement. The soft foam underpad conforms to the patient providing a cushion to reduce pressure points on the skin surface. The Wye Securement strap provides a solid barrier at the point where tugging most often occurs to help reduce catheter pistoning and accidental dislodgement.

- Low profile securement
- No hard plastic parts
- Helps prevent urethral erosion, pistoning, and accidental dislodgement
- Adjustable, can be repositioned
- Easy to place and remove

Catalog No.	Description	Size
FCS-1073	Secures 16/24 French	16 - 24 French
FCS-1074	Secures 10/14 French	10 - 14 French
FCS-1075	Secures 5/8 French	5 - 8 French

Clik-FIX Neonatal PICC

The Clik-FIX™ Neonatal PICC Securement device is designed with patient care in mind. It features a soft foam securement base with no hard plastic parts to cause pressure points, bruising, or trauma to the baby's skin. The built in "Chevron" securement straps lay over the catheter wing to stabilize the catheter and minimize micropistoning and inadvertent dislodgement. Clik-FIX Neonatal PICC Securement device features a universal design and is compatible with most neonatal PICC lines.

- Features skin-friendly hypoallergenic adhesive and center split release liner for easy and comfortable application
- Soft, comfortable foam cushions catheter wing reducing pressure ulcer risk
- Velcro straps "chevron" around the catheter wing to minimuze catheter movement risk
- Adhesive base gently holds catheter wing in place while applying device

We also make temperature probes and face shields.

Temperature monitoring is an essential part of patient care.

Guidelines for Safe Surgery and Basic Anesthesia Monitoring require that all general anesthesia procedures must have basic patient monitoring including recommendations for continuous temperature monitoring.

Starboard Medical's Disposable Temperature Probes help you comply with required standards with accuracy, reliability, and a cost savings.

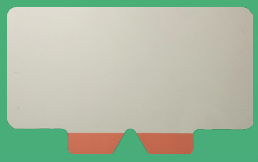

Starboard Medical offers temperature probes in the following configurations:

- Esophageal Stephoscopes
- Skin Sensors
- General Purpose Probes
- Tympanic Temperature Sensors

Mask2Shield offers the protection you need.

Mask2Shield is a one time use, lightweight eyeshield designed to attach to any surgical or respirator mask. Mask2Shield was designed to protect the face from hazardous droplets and sprays while also being comfortable to wear for extended periods of time.

This effortless PPE converts a mask to a shield in seconds. It is disposable to reduces risk of cross-contamination. Mask2Shield offers full frontal and lateral coverage which helps reduce the risk of eye splash contamination. Mask2Shield is optically clear and allows for good visibility.

Mask2Shield's versatile fit allows the mask to be worn in tandem with other PPE, hair coverings, and prescription glasses. It includes an optional head strap so there is no additional pressure behind the wearer's ears.
